Education

Symbiosis Institute of Technology — Nagpur, Maharashtra
Bachelor of Technology in Computer Science & Engineering — *Expected Graduation: 2028*

Indian Institute of Technology Madras — Chennai, Tamil Nadu
Bachelor of Science in Data Science and Applications (Foundation Level) — *May 2024 – Present*

Experience

Python Full Stack Intern — May 2026 – June 2026
Maincraft Technologies

- Developed SkillForge, a full-stack Learning Management System using Flask, SQLite, Bootstrap and REST APIs.
- Designed secure authentication using password hashing, OTP-based password recovery, session management and role-based access control.
- Built administrator modules supporting complete course and user management, analytics dashboard, audit logging and CSV export.
- Integrated administrator-managed private YouTube video delivery for secure multimedia course content.
- Developed REST APIs secured through API-key authentication for programmatic platform access.

Web Development Intern — Nov. 2025 – Dec. 2025
Elevate Labs

- Completed a 45-day task-based internship focused on modern web development.
- Built responsive web applications while completing weekly development assignments.

Projects

SkillForge | *Flask, SQLite, Bootstrap, REST API* — Solo Project

- Engineered a full-stack Learning Management System supporting authentication, enrollments, progress tracking, reviews and certificate generation.
- Implemented role-based authorization, OTP authentication, secure session management and administrator workflows.
- Built REST APIs, analytics dashboards, audit logs and administrator tools for complete platform management.
- Integrated secure private YouTube course streaming, enabling administrators to deliver multimedia educational content.

Agriculture Price Prediction | *Machine Learning, Python* — Team Project

- Developed a machine learning system for agricultural price prediction using historical crop market datasets.
- Co-authored a research paper presented at IEEE TEMSMET 2025 (NIT Delhi) and published in IEEE Xplore.
- Awarded a granted patent for the proposed system (June 2026).

CustomerPulse | *AWS Bedrock, FastAPI, PostgreSQL, RAG* — Hackathon Project

- Developed an AI-powered customer complaint intelligence platform leveraging Retrieval-Augmented Generation for complaint analysis and automated response generation.
- Implemented churn prediction, duplicate complaint detection, SLA monitoring and real-time complaint lifecycle tracking.
- Selected among the Top 1% of over 1,500 participating teams in the Union Bank × KJ Somaiya hackathon.

MemoryLens | *Python, FastAPI, Ollama, LLaMA, FAISS* — AI for Bharat Hackathon

- Developed an offline AI assistant capable of querying PDFs, code repositories and local documents using Retrieval-Augmented Generation.
- Designed a privacy-first architecture performing all inference locally without cloud APIs while delivering low-latency semantic search.

Publications & Patents

Publication: Research paper presented at IEEE TEMSMET 2025 (NIT Delhi) and published in IEEE Xplore.
Patent Published: Agriculture Price Prediction System (June 2026).
Patent Published: CycleCura: Smart Menstrual Cycle Prediction and PCOS/PCOD Risk Detection System (January 2026).

Leadership & Activities

Core Member IEEE Student Branch

Symbiosis Institute of Technology

- Organized multiple technical workshops and institute-level events.
- Volunteered for SIT Novate, the institute's flagship 24-hour hackathon.

Certifications

Red Hat Certified System Administration I (RH124)
Python Programming with Red Hat (AD141)

Technical Skills

Languages: Python, C, JavaScript, HTML, CSS, SQL
Frameworks: Flask, FastAPI, Node.js, Bootstrap
Libraries: Pandas, NumPy, Matplotlib, WebSockets
Developer Tools: Git, GitHub, AWS, VS Code, Antigravity IDE
Core Concepts: REST APIs, Machine Learning, Retrieval-Augmented Generation (RAG), Authentication, Role-Based Access Control (RBAC), Database Design
